Cross Validation options	10

Purpose

Join trawl survey data with ROMS oceanographic data and substrate data, and write an sdmTMB wrapper to run models. Actual modelling done in script sdmTMB models.Rmd

Import Data

Trawl Data

Trawl data, including a matching key to link to ROMS data. The hindcast ROMS data has values for all trawl survey locations for all times, but we just want the values matched to the actual trawl survey times/dates.

```
mutate(date=as_date(date))
# roms time refernce
roms_time <- read_rds(here('data','roms_time_date_reference.rds'))</pre>
trawl_locs <- read_rds(here::here('data','trawl','trawlID.rds')) %>%
   # add a dummy indicator of a "real" trawl survey location in time/space
   mutate(date=as_datetime(trawl_time,origin="1900-01-01")) %>%
   mutate(date=as date(date)) %>%
   mutate(realTrawl=1) %>%
   # join the roms_time reference
   left_join(roms_time) %>%
   # select the variable we'll use to match
   dplyr::select(station,date,time,lon_trawl,lat_trawl,depth_trawl,realTrawl)
## Joining, by = "date"
trawl <- trawl %>%
   left_join(trawl_locs,by=c("date"="date","longitude_dd"="lon_trawl","latitude_dd"="lat_trawl","depth"=
Filter the trawl survey data to fit within the time frame for which we have ROMS hindcast data (1980-2010)
trawl <- trawl %>%
   filter(realTrawl==1) %>%
   dplyr::select(-realTrawl) %>%
   # rename time to something more useful
   rename(roms hindcast day=time)
glimpse(trawl)

```

For the ROMS data (for now), we are using modelled temperature and oxygen, lagged 30 days from each trawl survey location and time.

```
roms_thin <- roms %>%
   dplyr::select(station,lon_trawl,lat_trawl,depth_trawl,mean_temp_roms_30,mean_oxygen_roms_30)
```

Join Datasets

Join Trawl and ROMS

Join the two datasets together, such that we have the appropriately-matched ROMS outputs

```
trawl_roms <- trawl %>% left_join(roms,by = c("date", "station", "roms_hindcast_day")) %>%
    #clean up some columns
dplyr::select(date,trawl_id,station,lon_trawl,lat_trawl,depth_trawl,mean_temp_roms_30,mean_oxygen_roms
# drop any rows with NAs
drop_na()

# test <- trawl %>% left_join(roms,by = c("date", "station", "roms_hindcast_day")) %>%
# #clean up some columns
# dplyr::select(date,trawl_id,station,lon_trawl,lat_trawl,depth_trawl,temp_roms,oxygen_roms,mean_temp_roms,oxygen_roms,mean_temp_roms,oxygen_roms,mean_temp_roms_oxygen_roms,mean_temp_roms_oxygen_roms,mean_temp_roms_oxygen_roms,mean_temp_roms_oxygen_roms,mean_temp_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms_oxygen_roms
```

Join Trawl and Substrate

drop_na()

Join the substrate data by trawl ID number.

```
substrate_thin <- substrate %>%
  dplyr::select(TRAWL_ID,prop_hard_mixed)
trawl_roms <- trawl_roms %>%
  left_join(substrate_thin,by=c('trawl_id'="TRAWL_ID")) %>%
  drop_na()
```

Prepare Data for sdmTMB

Convert the trawl spatial data to UTM.

We can save this version of the data so we do not have to run the join every time.

```
write_rds(trawl_roms_utm,here::here('data','trawl_roms_joined.rds'))
```

Functions to Run a Model

We'll write two functions, one to prepare a specific species for an sdmTMB model, and another to actually run an sdmTMB model with custom options

Prepare Species' Data

This function selects a species' data from the trawl survey data, converts the spatial data to UTM, does a couple of filters for missing data, and then joins the ROMS hindcast data to it by time and location.

```
prepare_species <- function(dat,spp){
  dat_sub <- dat %>%
    filter(species==spp) %>%

# rescale depth, oxygen, and temp to be N(0,1)
    mutate(across(c(depth_trawl,mean_temp_roms_30,mean_oxygen_roms_30),~(scale(.) %>% as.vector()),.nam

# add a year indicator
    mutate(year=lubridate::year(date))
}
```

Try an example for sablefish

```
sablefish_dat <- prepare_species(trawl_roms_utm,spp="sablefish")
glimpse(sablefish_dat)</pre>
```

sdmTMB Model Function

Write a function that runs sdmTMB. It will call the previous function to make the appropriate species data. For now, the environmental variable names are not generic (always mean_temp_roms_30_norm and mean_oxygen_roms_30_norm)

```
# nknots=400;use_depth=F;time_vary=F;spatial_field=T;hab_spline=F;env_spline=F;spline_k=3
\# rm(time_varying,spatial_field,hab_spline,env_spline,spline_k,modeldat,spde,formula,substrate,enviro,d
run_sdmTMB <- function(dat,spp,nknots=400,use_depth=F,time_vary=F,spatial_field=T,hab_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,env_spline=F,e

   pluck('cv_loglik') %>%
  if(return_what=='model') return(m_cv)
  else return(total_pred_ll)
}
```

```
test_cv <- run_sdmTMB_cv(dat=trawl_roms_utm,spp='sablefish',return_what = 'model')</pre>
```

Cross Validation options

If we wanted to use cross validation, we could do that in a couple ways. For example, with a single train/test split, we could assign 10% of the observations to the test set and not fit the model for all the folds (fitting to all folds is the default in sdmTMB_cv).

```
set.seed(41389) # for reproducibility
test_set = sample(1:nrow(modeldat), size = round(0.1*nrow(modeldat)), replace=FALSE)
modeldat$fold = 1
modeldat$fold[test_set] = 2
head(modeldat$fold,25)
```

Alternatively we could do something like assign all points for a given year (e.g. 2018) to the test set.

```
\# modeldat\$fold = ifelse(modeldat\$year=="2018",2,1)
```

A third option is to use blockCV to assign the folds. If you have raster data, there's a few functions in that package (spatialAutoRange, rangeExplorer) to estimate the range – but because those are probably difficult to estimate with the kind of data we have, I've generally used ranges in the 50-75km, which is about what's estimated for many WCBTS species.

```
the_data <- sf::st_as_sf(modeldat, coords = c("longitude", "latitude"),crs="+proj=utm +zone=10 +datum=W
sb <- spatialBlock(
    speciesData = the_data,</pre>
```

```
species = "xxxxx",
theRange = 5000, # range should be in meters
# k = 10,
selection = "systematic",
showBlocks = FALSE
)
modeldat$fold = ifelse(sb$fold==1,2,1)
```

And then we can use sdmTMB_cv to do the estimation for each fold. Because we did the test-train split, we'll fit the model 2x, but just be interested in the 1st fit.

```
m_cv <- try( sdmTMB_cv(</pre>
    formula = as.formula(formula),
    # time_varying = time_varying,
    spde = spde,
    k_folds = 2,
    fold_ids = "fold",
   time = 'year',
   family = tweedie(link = "log"),
    data = modeldat,
    anisotropy = FALSE,
    spatial_only = T,
    #extra_time argument necessary for prediction?
    extra_time=1980:2100,
    map_rf=T
    # map_rf=ifelse(spatial_field,F,T)
  ),
  silent=TRUE)
# predicted values for the 2nd fold (test)
m_cv$data$cv_predicted[which(m_cv$data$cv_fold==2)]
# log likelihood values for the 2nd fold (test)
m_cv$data$cv_loglik[which(m_cv$data$cv_fold==2)]
total_pred_ll = sum(m_cv$data$cv_loglik[which(m_cv$data$cv_fold==2)])
```

This is the end of this script. Moving the actual modelling (i.e., the calling of this function) to a new script.
